CREDITS 98

The LISC Sustainable Communities Initiative supports community-driven efforts to revitalize neighborhoods through comprehensive community development. In 2006, Indianapolis launched the Great Indy Neighborhoods Initiative (GINI) to promote healthy communities through comprehensive quality of life planning and development. This effort has resulted in several programs and targeted investments in six demonstration sites throughout the city. This report expands this effort to the Mid North Neighborhood by providing local data and indicators of quality of life.

Mid North residents have engaged in a planning process to create a strategy for their neighborhoods based on their shared vision for the future. This data book has been prepared by the City of Indianpolis at the request of the Local Support Initiaves Corporation to assist in informing area residents about a variey of topics that are pertinent to this important endeavor.

The graphs and maps used in this report are based on the best-available information from local and national sources. Although these indicators do not show everything about the neighborhood's quality of life, they do refer to items many residents believe are important.

When possible, information in this report is provided at the U.S. Census Block Group level*. Block Groups were preferred because they better conform to neighborhood boundaries and provide more geographic detail than Census Tracts alone. Comparisons to Marion County are offered to show how Mid North compares to the larger area in which it resides.

This report is organized as follows:

- Historic Sites and Structures
- Demographics
- Land Use
- Housing and Real Estate
- Income and Wealth
- Economy and Workforce
- Public Safety
- Education
- Health

* In a few instances, that are noted in the document text, block level data were utilized.

Mid North is located in central Marion County. It is well served by Interstates and local thoroughfares. It is a diverse area containing multiple neighborhoods and significant landmarks such as Crown Hill Cemetery, Ivy Tech Community College, and the Indianapolis Children's Museum. Neighborhoods in the Mid North area include: Crown Hill, Watson McCord, Mapleton-Fall Creek, Historic Meridian Park, Meridian Highland, Highland Vicinity and Haywood Park. The eastern edge of the area is defined by Fall Creek, a scenic boulevard and linear park that was planned by George Kessler. The total area of the Mid North is 2.11 square miles.

DEMOGRAPHICS

Mid North's total population in 2000 was 15,039. According to the 2010 Census, the total population of the Mid North area is 10,910. Since 2000, the Mid North area lost 4,129 people (-27.46%).

In comparison, Center Township's total population in 2000 was 167,055. According to the 2010 Census, the total population of Center Township is 142,787. Since 2000, Center Township lost 24,268 people (-14.53%).

3516002	955
Mid North Total	15,039
Marion County Total	860,454

Marion County's total population in 2000 was 860,454. According to the 2010 Census, the total population of Marion County is 903,393. Since 2000, Marion County gained 42,939 people (+4.75%).

Center Township's population loss between 1950 and 2010 is nearly 58%. Mid North, like other Center Township neighborhoods, has followed this trend. Between 2000 and 2010, the Mid North area lost population at a greater rate than Center Township, while Marion County grew.

The most densely-populated portion of the Mid North area occurs along the Meridian Street corridor, where many multi-story, high-density apartment buildings are located, and along the Fall Creek and College corridors.

In 2010, Marion County had a population density of 2,241.45 people per square mile. In 2010, Mid North had a population density of 5,170.62 people per square mile. The area of Mid North is 0.52% of the total area of Marion County. The population of Mid North is 1.21% of Marion County.

2010 census tract/block group *3905002 generally corresponds to 2000 census tract/block group 350201. 2010 census tract/block group *3905002 is shown with an asterisk because the population shown in the table was aggregated from block data only for the portion of the block group east of Dr. M. L. King Jr. Street as opposed to the entire block group, more closely reflecting the true population of the Mid North area.

The age pyramids to the right show population distribution by age and gender. Combined with other demographics, they give insight into the types of services a community may need in the coming years.

Compared with Marion County, Mid North contains a larger proportion of males in the 70 -79 age group and females in the 80 and older age group. Mid North has a higher proportion of youth age 9 and under as well as lower proportions of young adults in the 15 - 39 age ranges than Marion County. Generally, Mid North has a lower proportion of persons in the child bearing age groups which suggests that population growth from within the area could decline in the future.

The percentage of Mid North residents with no high school diploma is 32%. This compares with 18% for Marion County. As can be seen in the graph below, at 32% this is the largest educational attainment segment of the Mid North population. The next largest group in Mid North (30%) have no more than a high school diploma, which is the same rate as Marion County's 30%. Mid North has the same percentage of residents that have some college, but no degree as does Marion County and about half the rate of residents possessing bachelor and advanced degrees as Marion County.

The average household income in the Mid North area as of the 2000 Census was $34,733, which is approximately 40% less than Marion County ($52,519). The average family income of Mid North residents was $42,194 compared to $61,851 for Marion County, which is approximately 33% less.

The Neighborhood Health Indicators project is a tool to assess current neighborhood conditions and predict future problems. The project utilizes GIS mapping analysis to grade current neighborhood conditions based on 11 data indicators. Marion County is broken down into 658 Census Block Groups and each block group is given a ranking. The block groups are then divided into five categories: in decline, stable to declining, stable, stable to improving, and improved. These categories can then be used to assist in resource allocation.

The 11 data indicators include: education level, income, poverty, unemployment, demolition permits, vacant/boarding orders, repair orders, long-term utility disconnects, foreclosures, new building permits and assessed valuation. It should be noted that the Neighborhood Health Indicators are just that, indicators, not an exact measurement. The benefit of these particular indicators is that they can be updated on an annual basis rather than decennial basis as is the case with Census data.

The Neighborhood Health Indicators project has recently been used to correlate crime to areas of the city in decline.

The goal of the Neighborhood Health Indicators project is to provide an information framework for guiding public policy decisions and allocating City resources.

According to the Neighborhood Health Indicator results from 2009, 10 out of 20 Census tract/block groups in the Mid North area are in decline, with another seven stable to declining. Only three out of 20 Census tract/block groups are ranked as stable. There were no areas that ranked as stable to improving or improved.

Data Source: Indianapolis Division of Planning

The Mid North area is predominantly comprised of special use and residential land use. A significant portion of the land area is devoted to tax-exempt and non-taxable special uses such as Crown Hill Cemetery, Ivy Tech Community College, the Children's Museum, and churches that occur along the Meridian Street corridor. The Meridian Street corridor is also home to most of the higher-density residential and commercial uses in the area. The Fall Creek corridor and linear park, which are part of the original Indianapolis Park & Boulevard Plan (also known as the Kessler Plan), represent a significant asset for Mid North and the City as a whole.

The following table compares the percentage of existing land uses for the Mid North area and Marion County:

Land Use	Marion County	Mid North
Unclassified	2.20%	2.36%
Agriculture	11.27%	0%
Mining	.0003%	0%
Industrial	6.75%	.11%
Commercial	15.15%	14.81%
Residential	45.66%	39.86%
Tax-Exempt	18.98%	42.87%

As compared to Marion County, the Mid North area has no agriculture or mining and very little industrial land use. Given its location along North Meridian Street and proximity to historical street car lines, the value of the land necessitated high-density residential and commercial development. The difference in tax-exempt land use between the Mid North area and Marion County can be attributed primarily to Crown Hill Cemetery which accounts for 373.6 acres or 27.7% of the Mid North area. Approximately one-third (4.98%) of the commercial land use is devoted to multi-family apartment buildings.

In 2010, the total area of Marion County was 403.04 square miles (including water features) with a population density of 2,241.45 people per square mile. The total area of the Mid North area is 2.11 square miles with a population density of 5,170.62 people per square mile. The area of Mid North is 0.52% of the total area of Marion County. The population of Mid North is 1.21% of Marion County.

Land use in Indianapolis is guided by the Marion County Comprehensive Plan. The Comprehensive Plan is required by state statute as a basis for zoning and must include objectives and policies for future land development and development of public ways, place, land, structures and utilities. It is also required by a number of state and federal grants programs in which the City takes part.

The Marion County Comprehensive Plan is comprised of neighborhood plans, corridor plans, parks plans, the Marion County Thoroughfare Plan and township-level land use plans. Proposed land use in the Mid North area consists of six separate land use plans: Crown Hill Neighborhood Plan, Near North Neighborhood Plan, North Meridian Street Corridor – Section 6 Plan, North Meridian Street Corridor Plan (16th -30th Street), 38th Street Corridor Plan and the Mapleton-Fall Creek Neighborhood Plan.

Mid North is highly-developed and the proposed land use does not differ much from the existing land use. The area has a high concentration of low to mid-density residential development, high-density multi-family development and special uses, such as churches, schools, parks and Crown Hill Cemetery.

Land Use	Proposed	Existing
Unclassified	0%	2.36%
Agriculture	0%	0%
Mining	0%	0%
Industrial	0%	.11%
Commercial	23.58%	14.81%
Residential	38.52%	39.86%
Tax-Exempt	37.83%	42.87%
New Streets	.06%	N/A

The proposed land use plans recommend that all industrial uses be converted to other uses. Low- to mid-density residential land uses and tax-exempt special uses remain nearly the same. The biggest change in proposed land use is in the commercial category. This can be attributed to the conversion of industrial uses, vacant commercial land and vacant, underutilized, and tax-exempt property being redeveloped.

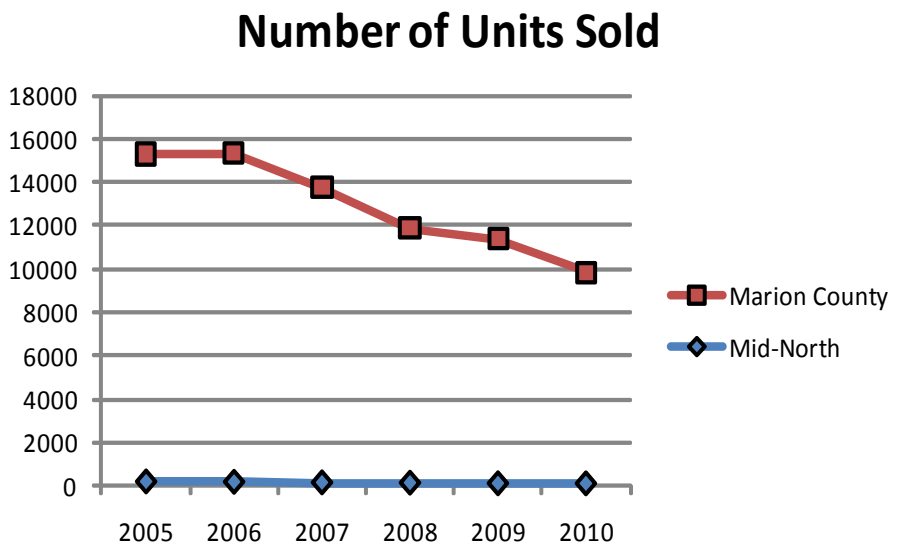
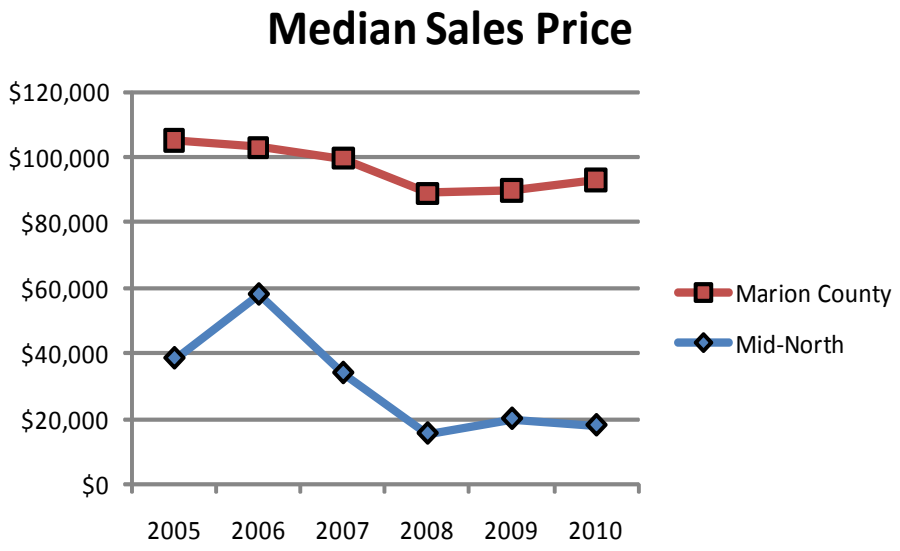
Data provided by the Metropolitan Indianapolis Board of Realtors indicate that the number of housing units sold in the Mid North area has dramatically declined between 2005 and 2010. This echoes the same pattern seen in Marion County and is a direct result of the 2008 recession and subsequent collapse of the real estate market.

The same trends can be seen in median home sales prices between 2005 and 2010. Even during a healthy economy, median home sales prices were considerably lower in the Mid North area when compared to Marion County.

It is important to note that not all homes sold in Marion County are listed through MIBOR. Many homes, especially those in Center Township, are contract sales. Median home sales prices in portions of the Mid North area might be lower than the MIBOR average. Revitalized areas such as Meridian Park, Watson Road and areas immediately south of Meridian Kessler most likely have median home sales values that are at or above Marion County averages.



MIBOR Data				
Year	Mid-North		Marion County	
	# Sold	Median Sales Price	# Sold	Median Sales Price
2005	200	$ 38,500	15,298	$ 105,050
2006	186	$ 58,017	15,318	$ 103,000
2007	161	$ 34,000	13,750	$ 99,500
2008	147	$ 15,500	11,895	$ 89,000
2009	123	$ 20,000	11,391	$ 89,900
2010	118	$ 18,001	9,859	$ 93,000
2011 YTD	13	$ 53,500	927	$ 82,000



Data Source: Metropolitan Indianapolis Board of Realtors

A foreclosure is the legal process by which a borrower in default on a mortgage is deprived of their interest in the mortgaged property. These properties are usually sold for an amount much lower than the actual market value, impacting average sales prices in the neighborhood.

Foreclosures in the Mid North area peaked in 2007 then leveled off at a lower level through 2008 and the first part of 2009. The rate of foreclosures fell again in the spring of 2009, ending in December at a rate per 1000 housing units similar to Marion County. The portion of the neighborhood north of 30th Street has the highest concentrations of foreclosures.

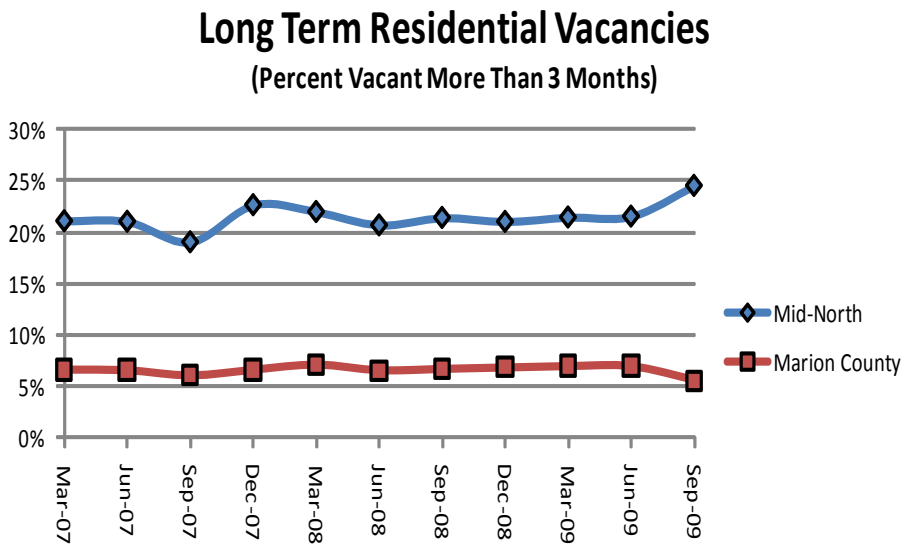
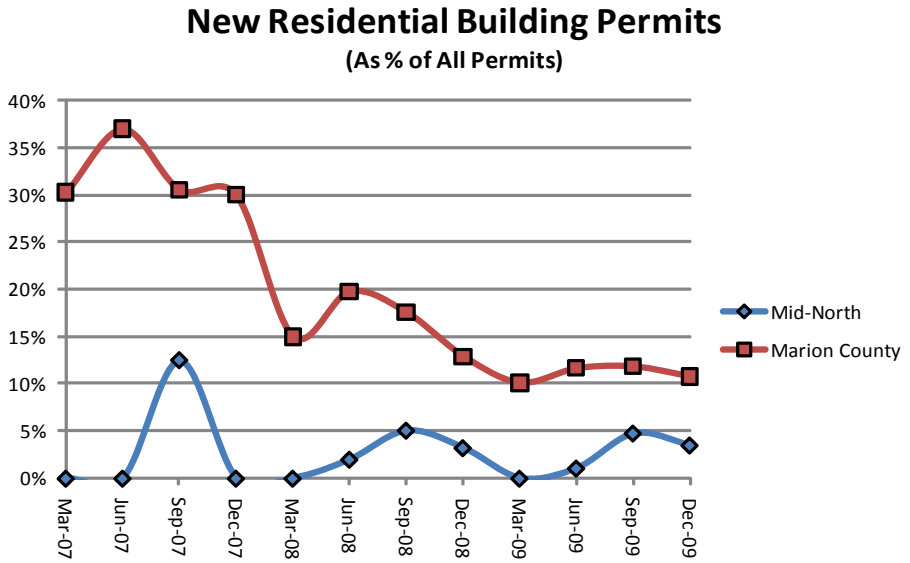
Data Source: Marion County Sheriff, United States Postal Service Vacancy Data

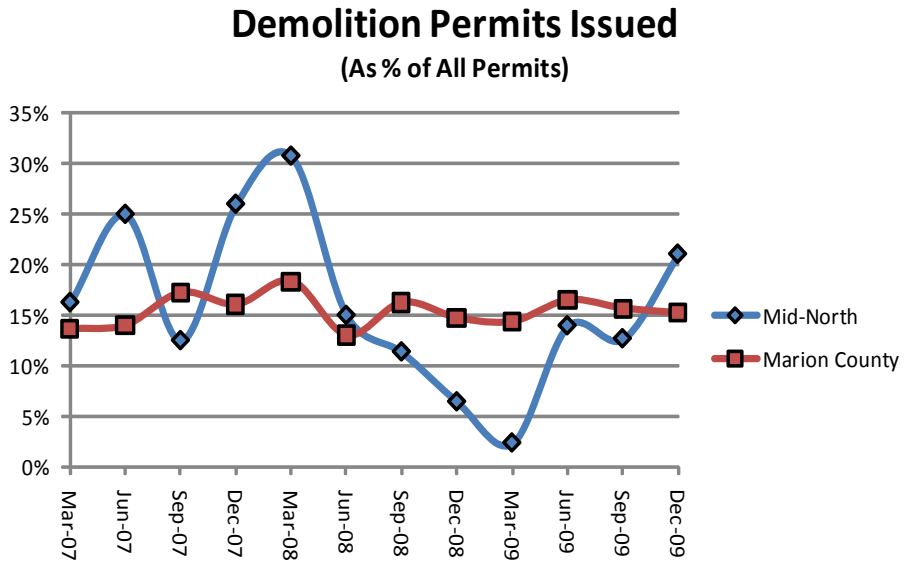
Long term residential vacancies in the Mid North area were substantially higher than Marion County from 2008 through the 3rd quarter of 2010. In September of 2010, the gap between Mid North and Marion County begins to increase with 25% of residential addresses in Mid North vacant compared to 6% for Marion County.



In reviewing new residential building permits, it is important to note that not all of the permitted projects necessarily get built. However, new permits are an indicator of demand for new housing. As can be seen from the graph to the right, the demand for new housing construction in Mid North is lower than Marion County. This may be because the Mid North area is highly developed. The gap decreased between Mid North and Marion County over the 2007-2009 period.



In reviewing demolition permits issued, it is important to note that not all of the permitted projects necessarily get demolished. However, demolition permits can be viewed as an indicator of physical distress. As can be seen from the graph to the right, the percentage of demolition permits issued in the Mid North area is generally higher than Marion County. A recent exception to this is the period between September of 2008 and September of 2009 when the Mid North rate was lower.



Data Source: Indianapolis Department of Code Enforcement

High-cost loans as defined by HUD are those with interest rates 3 percentage points higher than a benchmark (Treasury security) rate. The information shown in the map to the right is for 2009 based on Home Mortgage Disclosure Act data. In Mid North, 39% or more loans were high-cost in 18 out of 20 Census tract/ block groups.

The area of Mid North is 0.52% of the total area of Marion County (see existing land use on page 14), yet contains 1.06% of the county's total assessed value. The high assessment value can be attributed to commercial offices, high-density apartment buildings and densely-developed residential neighborhoods.

Assessed Land and Improvement Values, 2009

Housing is a basic need and impacts residents' quality of life. The housing market reflects the economic shifts and housing quality of a neighborhood. Increased housing values relative to other neighborhoods can mean neighborhood quality is improving.

There were only two census tract/block groups in the Mid North area whose median housing values were greater than Marion County's median housing value of $99,000. The median housing value in census tract/block group 3502001 was $181,300 and can be attributed to the Golden Hills neighborhood to the West of Crown Hill Cemetery. The median housing value in census tract/block group 3510002 was $118,800 and can be attributed to the historic Meridian Park neighborhood.

Nearly half of the census tract/block groups in the Mid North area had median housing values that were approximately 50% lower than Marion County.

The values reflected in these tables and charts are from the 2000 Census. The recent housing "bubble" which led to increases in the number of foreclosures and reductions in housing values should be taken into consideration when reviewing these data.

Median monthly homeowner costs as a percent of total household income is an important factor in determining how much people are paying for housing costs in relation to their total income. The more money that is spent on housing, the less money is available for food, transportation and retirement savings. The general rule of thumb is that no more than 30% of a household's total income should go towards housing.

Median Monthly Homeowner Costs as a Percent of Total Household Income, 2000

Mid North Tract/Block Group	All Owners	With Mortgage	Without Mortgage
3502001	10.0	26.2	9.9
3503001	19.2	25.3	12.9
3503002	13.4	14.8	11.9
3503003	16.0	17.6	9.9
3504001	18.0	19.7	13.1

Mid North Total	16.0	20.5	11.3
Marion County Total	18.1	20.2	10.0

In 2000, the median monthly homeowner cost as a percent of total household income for owners with a mortgage in Marion County was 20.2%. 11 out of the 20 Census tract/block groups in Mid North had higher median values than Marion County, meaning these Mid North homeowners pay more for housing costs than the average Marion County homeowner.

Over one-third of the Census tract/block groups in the Mid North area are ranked among the highest 20% of Marion County's in total homeowner costs.

The median gross rent in 19 out of 20 Census tract/block groups in the Mid North area is below the Marion County median gross rent. The one census tract/block group that is higher, 3515001, can be directly attributed to higher rents in the Marott Apartments. While nearly all of the median gross rents are lower in the Mid North area, the true affordability picture cannot be complete without looking at the median gross rents as a percent of total household income (see page 25). When this is taken into consideration, in the Mid North area, rental housing costs are less affordable than they appear.

Median Gross Rent, 2000

Median gross rent as a percent of total household income is an important factor in determining how much people are paying for housing costs in relation to their total income. The more money that is spent on housing, the less money is available for food, transportation and retirement savings. The general rule of thumb is that no more than 30% of a household's total income should go towards housing.

The median gross rent as a percent of total household income for Marion County was 24.5% in 2000. Only five out of 20 census tract/block groups in Mid North in 2000 were below the Marion County median, meaning people in the Mid North area are paying more for housing and have less available for other costs. Eight out of 20 census tract/block groups in Mid North devoted more than 30% of their total household income to housing costs.

In 2000, the median family income of Mid North residents was $24,091 which is substantially below the Marion County rate of $46,276.

The map to the right shows the concentration of wealth within the Mid North area. Due to the data collection methodology of the Census, it was not possible to accurately calculate median incomes for the Mid North area. The median income values provided in the table below show the range of median incomes within the Mid North area.

Median Incomes, 2000

Mid North Tract/ Block Group	Median Household Income	Median Family Income
3502001	$58,750	$63,125

The income and wealth of a community's residents indicate economic self-sufficiency, defined as the ability to support oneself and family without additional subsidies. The map to the right shows that much of the neighborhood experiences higher than average levels of poverty. High concentrations of individuals (24.8% and higher) living in census tract/block groups 3503001, 3503002, 3503003, and 3504001 were in poverty in 2000.

Unemployment in the Mid North area was high at the time of the 2000 Census with an unemployment rate of 12.9 percent, more than double the Marion County unemployment rate of 5.4 percent. The Mid North unemployment rate was also slightly higher than Center Township's 10.8 percent rate.

18 of the 20 census tract/block groups had unemployment rates that were higher than Marion County's rate. 10 of the 20 census tract/block groups had unemployment rates higher than Mid North's overall rate of 12.9 percent.

Although we do not have current unemployment data for Mid North, the major recession that began in 2007 nearly doubled Marion County's unemployment rate from 5.5% in June, 2008 to 10.2% in June, 2010 (U.S. Bureau of Labor Statistics).

The closing of Winona Hospital in 2004 most likely had a negative impact on Mid North employment.

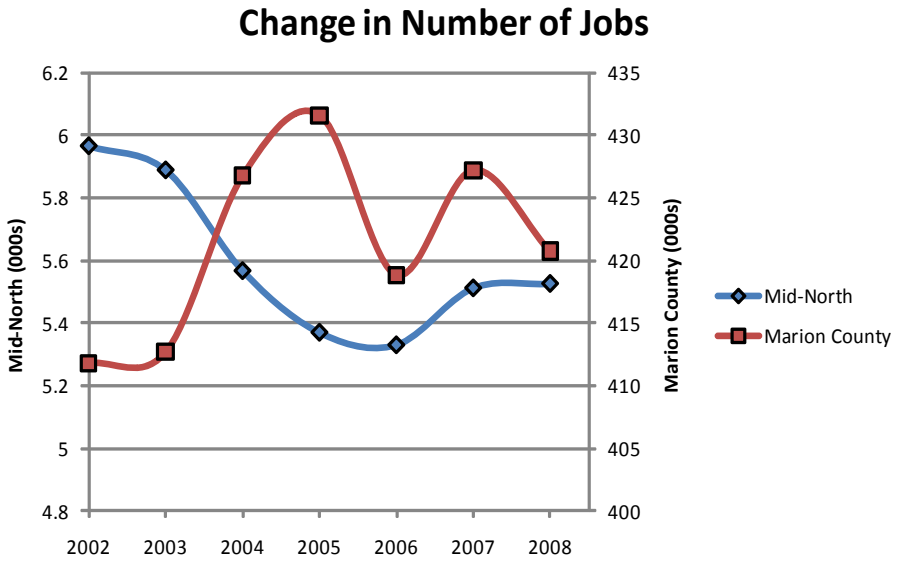
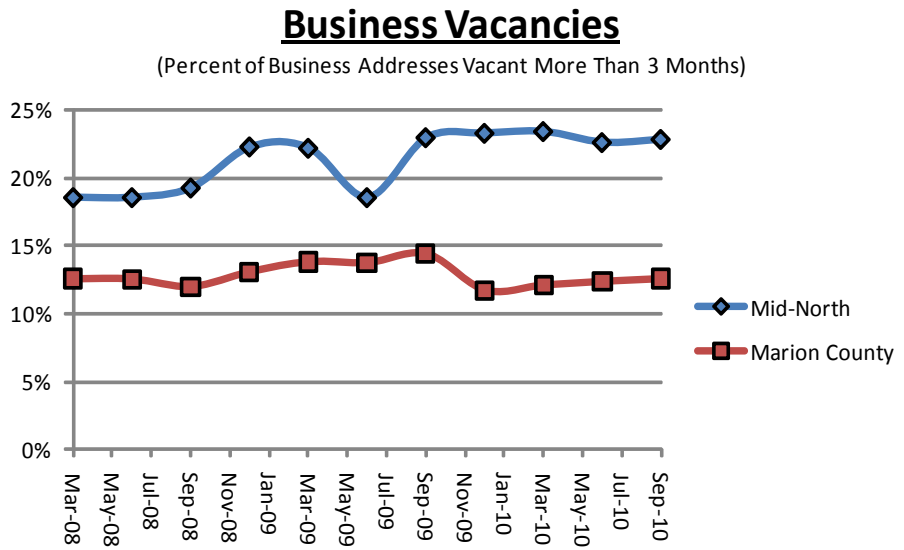
Employment is a major determinant of economic self-sufficiency. Given Mid North's high unemployment rate in 2000, what do we know about more recent changes in jobs and the types of industries area residents are working in?

The number of Mid North residents that were employed dropped from 2002 through 2006. From 2006 to 2007, employment increased then began to level off between 2007 and 2008. As of 2008, the gap between Mid North and Marion County decreased.

Most Mid North residents worked in the Health Care industry in 2008. This was followed by Accommodation and Food services, Administration and Support, Retail Trade and Education.

Viable businesses serve as a source of employment for neighborhood residents and provide stability through investment and tax revenue generation. The number of business addresses vacant for three months or more in the Mid North area is approximately double that of Marion County, meaning there are less employment opportunities. The closure of Winona Memorial Hospital in 2004 resulted in a large number of jobs lost.





Data Source: Local Employment Dynamics, United States Postal Service

According to the U.S. Census, the largest employment sector for Mid North residents was health care, followed by large concentrations in retail, accommodation and food (hospitality), manufacturing and finance, insurance and real estate (FIRE). The next largest concentrations were in administration and support, transportation and warehousing, education, construction, information, professional and scientific and public administration.

In 2008, the supply of local labor market jobs in the Mid North area was concentrated heavily in the health care sector, followed by accommodation and food services (hospitality), administration and support, retail trade and education. The next largest concentration was in manufacturing, public administration and transportation, professional and scientific and fire, insurance and real estate (FIRE), wholesale trade, construction and information.

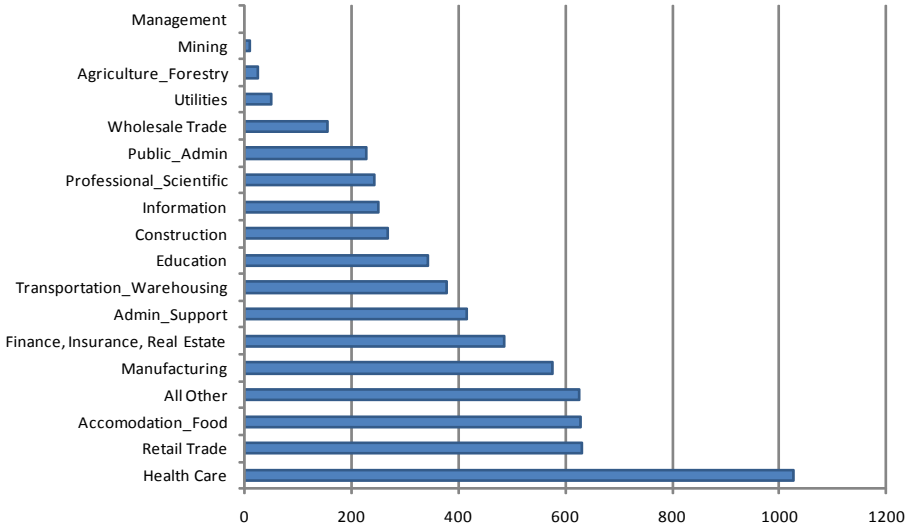
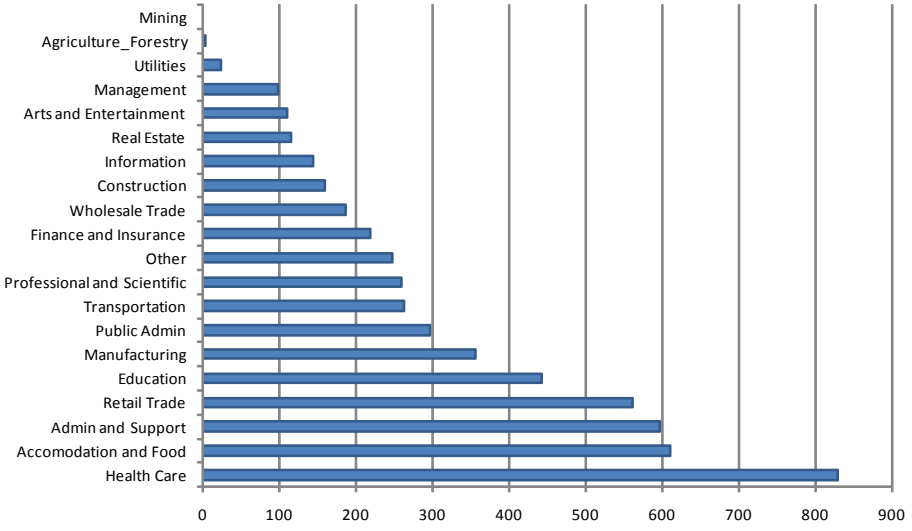
Number of Employed Residents of Mid-North by Industry Sector, 2000



Local Labor Market Jobs in Mid-North by Industry Type, 2008



By comparing the number of residents employed by industry in 2000 to the number of jobs in the local market in 2008 on the previous page, it can be concluded that residents must commute beyond the Mid North area for some jobs, while at the same time, there are not enough qualified residents to fill certain positions. The gap between the supply and demand in certain industry sectors will most likely be affected by the area's population loss from 2000 to 2010.

Uniform Crime Report (UCR) Part 1 Crimes, as defined by the FBI, include the violent crimes of criminal homicide (murder and non-negligent manslaughter), forcible rape, robbery, and aggravated assault and the property crimes of burglary, larceny (theft), and motor vehicle theft. Although they are not a Part 1 crime, simple assaults are counted at the request of the FBI and are included in the map to the right.

The map to the right shows that the Mid North area has a high percentage of crime incidents per square mile compared to the IMPD service area. The chart below breaks down the UCR part 1 crimes and simple assaults as a percentage of all UCR part 1 crimes and simple assault incidents.

The map and statistics on the following pages give an overall sense for the amount and type of criminal activity occurring within the Mid North area in comparison to the IMPD service area.

Data Source: Indianapolis Marion County Police Department, Uniform Crime Report

The UCR Part 1 crimes and simple assaults crime rate in Mid North decreased slightly between 2007 and 2008, mirroring the same trend as seen in the IMPD service area. The overall crime rate in Mid North in 2007 and 2008 is approximately 30 percent higher than the comparable IMPD service area for 2007 and 2008.

Crime rates for the Mid North area were calculated using a straight line estimate based on actual Census Block population data from the 2000 and 2010 censuses. Crime rates for the IMPD service area were calculated using U.S. Census population estimates from 2007 and 2008. The IMPD service area population figures shown in the following table are the same numbers used by the FBI.

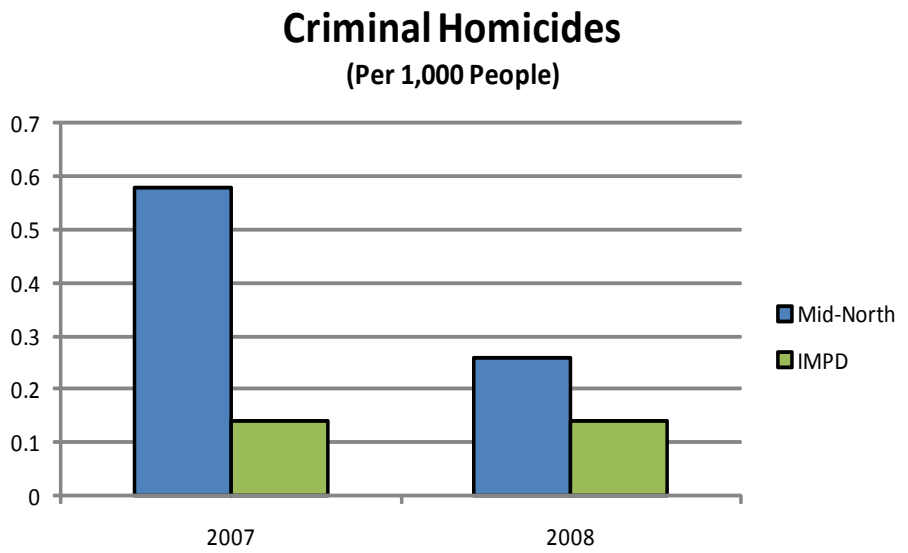
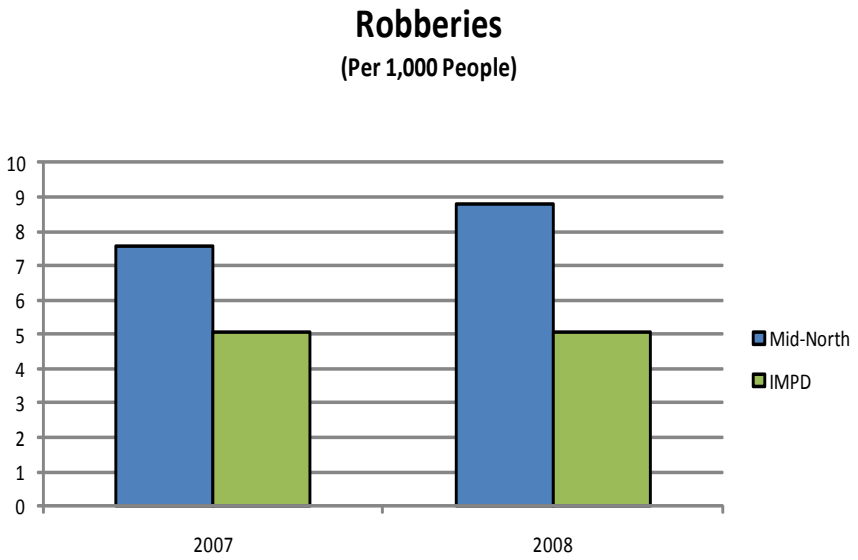
Data Source: Indianapolis Marion County Police Department, Uniform Crime Report

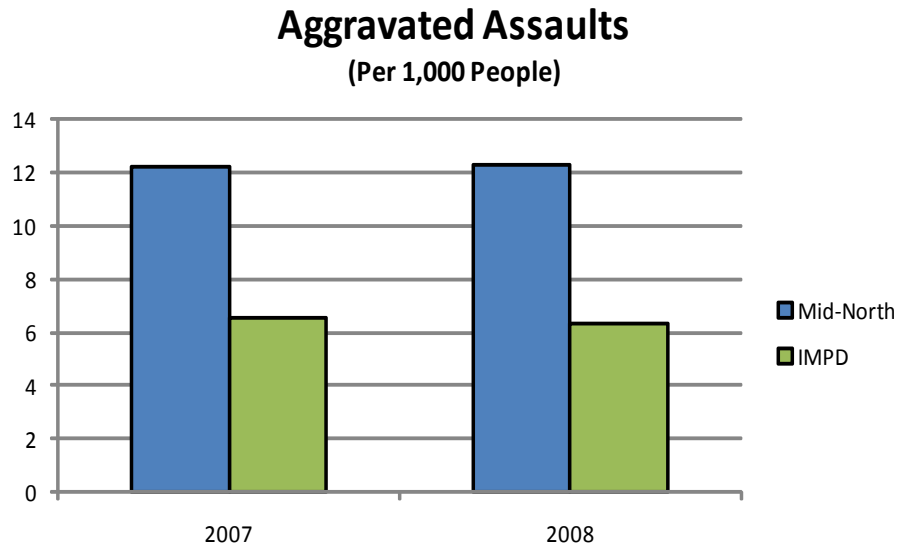
The criminal homicide (murder and non-negligent manslaughter) crime rate remained steady in the IMPD service area, while the criminal homicide crime rate in Mid North was cut in half. The Mid North criminal homicide crime rate in 2008 was approximately twice as high as the IMPD service area.

Between 2007 and 2008, the IMPD service area robbery crime rate fell slightly, while the robbery crime rate increased in the MID North area. The robbery crime rate for the Mid North area in 2008 was approximately 45% higher than the IMPD service area.

Between 2007 and 2008, the IMPD service area aggravated assault crime rate fell slightly, while the aggravated assault crime rate increased slightly in the Mid North area. The aggravated assault crime rate for the Mid North area in 2008 was approximately twice as high as the IMPD service area.





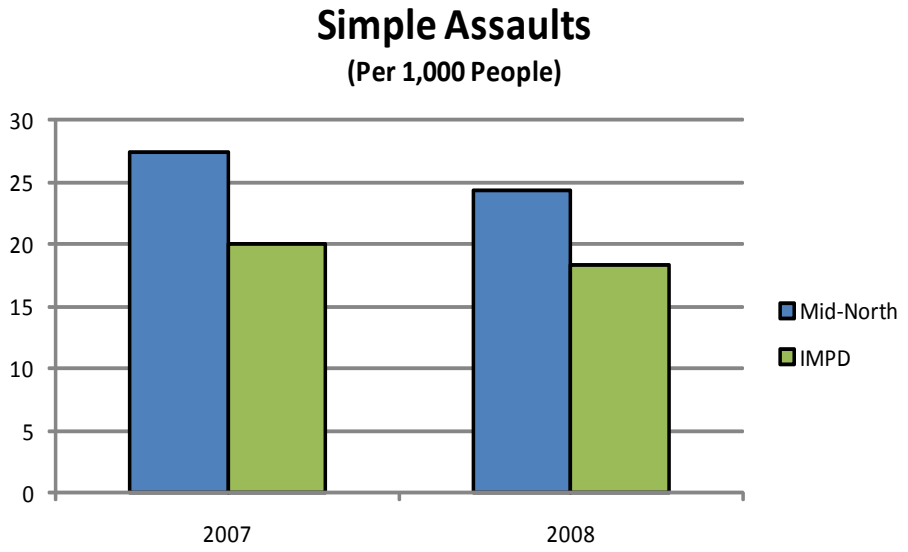


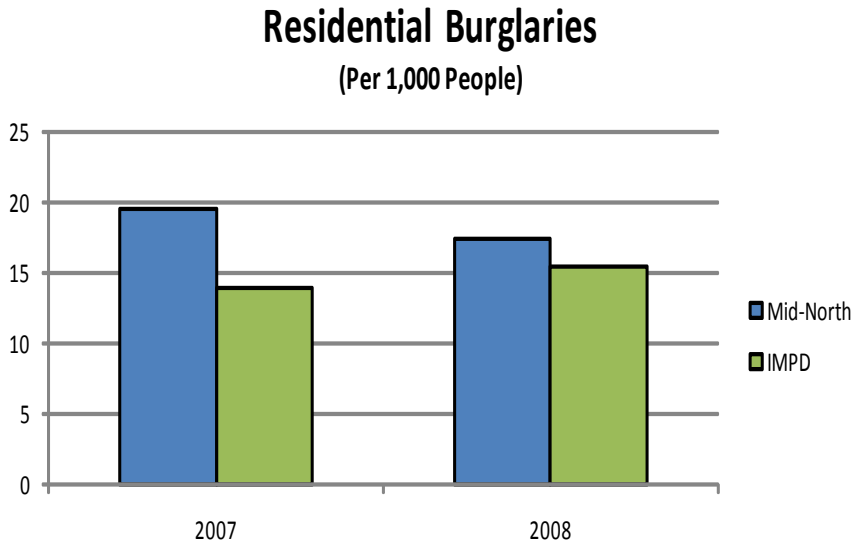
Data Source: Indianapolis Marion County Police Department, Uniform Crime Report

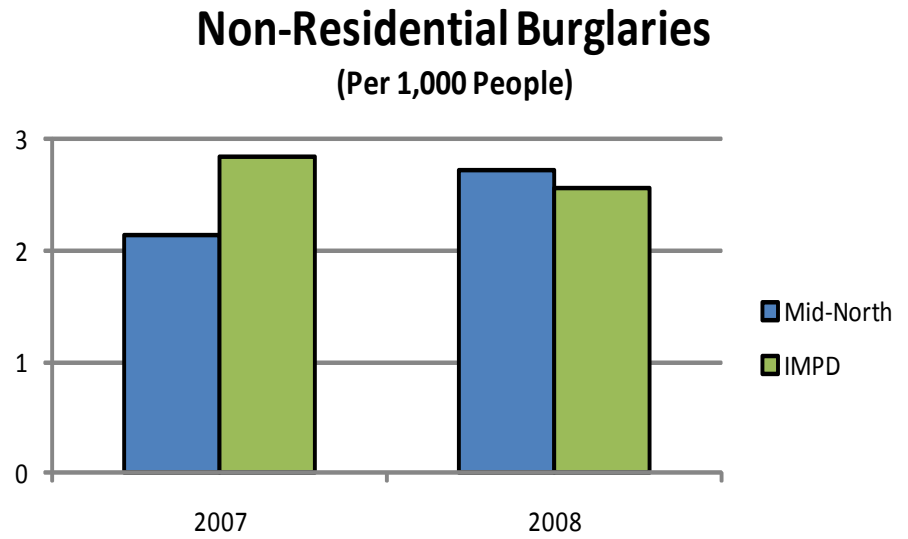
Between 2007 and 2008, the simple assault crime rate fell by approximately 10% in both the IMPD service area and the MID North area. The simple assault crime rate for the Mid North area in 2008 was approximately 33% higher than the IMPD service area.

Between 2007 and 2008, the IMPD service area residential burglary crime rate rose approximately 10%, while the residential burglary crime rate fell by approximately 10% in the MID North area. The residential burglary crime rate for the Mid North area in 2008 was approximately 12% higher than the IMPD service area.

Between 2007 and 2008, the IMPD service area non-residential burglary crime rate fell slightly, while the non-residential burglary crime rate rose slightly in the MID North area. The non-residential burglary crime rate for the Mid North area in 2008 was slightly higher than the IMPD service area.







Data Source: Indianapolis Marion County Police Department, Uniform Crime Report

Between 2007 and 2008, the IMPD service area larceny crime rate fell slightly, while the larceny crime rate fell by approximately 9% in the MID North area. The larceny crime rate for the Mid North area in 2008 was approximately 14.5% higher than the IMPD service area.

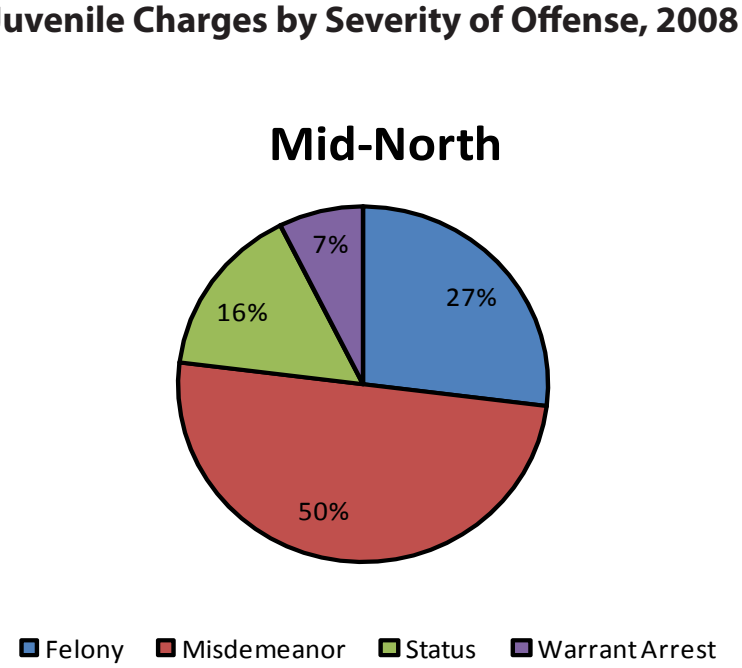
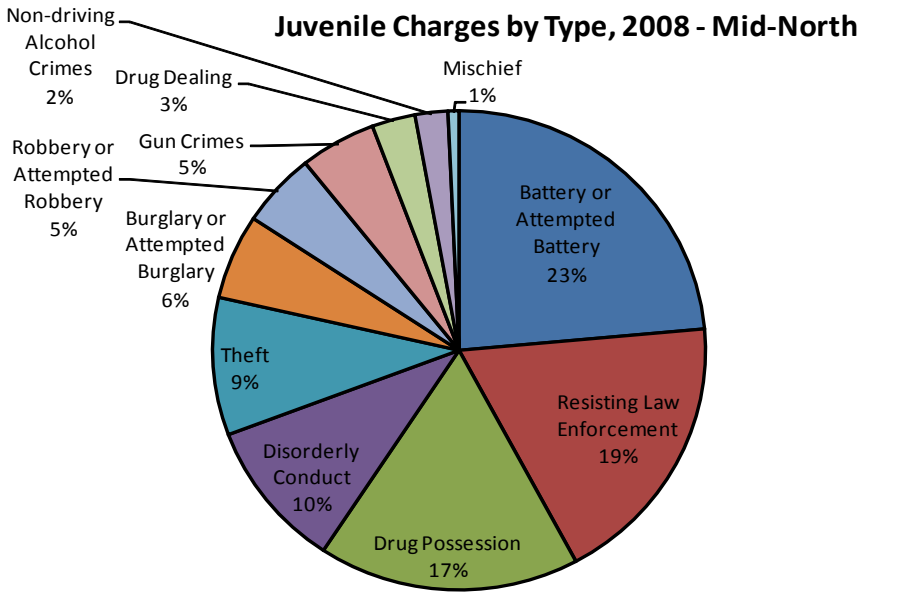
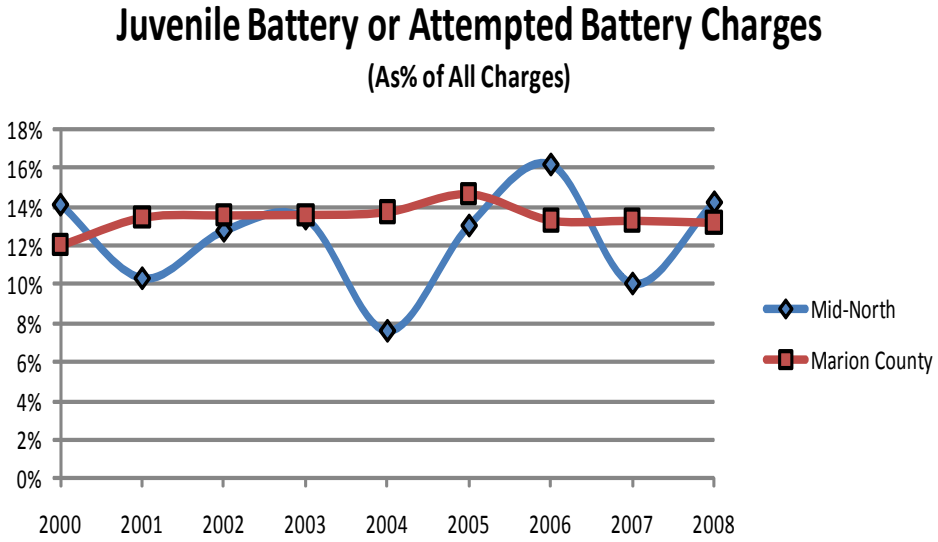
Data Source: Indianapolis Marion County Police Department



In 2008, the predominent juvenile charge in the Mid North area was Battery or Attempted Battery (23%) followed by Resisting Law Enforcement (19%), Drug Possession (17%), Disorderly Conduct (10%), Theft (9%), and Burglary or Attempted Bulgary (6%). The remaining categories of Robbery or Attempted Robbery, Gun Crimes, Drug Dealing, Non-driving Alcohol Crimes, and Mischief were all 5% or less.

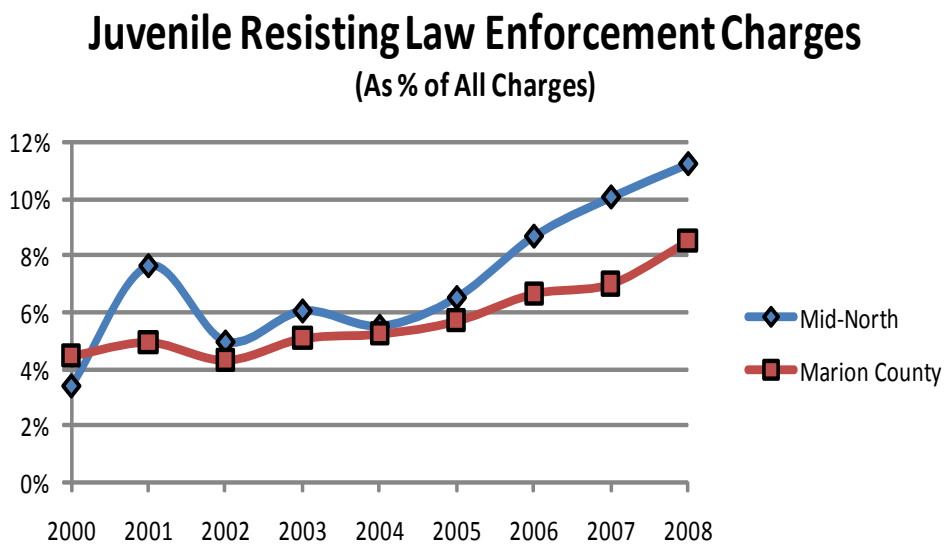


Juvenile Battery or Attempted Battery charges in the Mid North area were somewhat sporadic between 2000 and 2008 peaking in 2006 with this category constituting 16% of all juvenile charges in the area.



Data Source: Indianapolis Marion County Police Department

Juvenile Resisting Law Enforcement charges in the Mid North area occured at a rate higher than Marion County. Both the Mid North area and Marion County generally increased in this category from 2000 to 2008. In 2008, Resisting Law Enforcement charges accounted for just over 11% of all juvenile charges in the Mid North area, up from 3.4% in 2000.



Juvenile Drug Possession charges in the Mid North area were somewhat sporadic between 2000 and 2008, generally declining from 2000 through 2004, then generally increasing through 2008. This category peaked in 2008, constituting over 10% of all juvenile charges in the area.

As can be seen in the graphs on this page, the vast majority (70%) of juvenile offenses that occured in Mid North were committed by 15-18 year olds. Offenders were primarily male (76%) and African American (87%). Mid North is very similar to Marion County in regard to the age and race of juvenile offenders, although the proportion of juvenile offenses committed by African Americans is higher in the Mid North area. The degree to which these offenses were committed by residents versus non-residents is not known.

The data in this section regarding the ISTEP and the number of Children Eligible for the Free Lunch Program were only available for a portion of the schools inside Mid North's boundaries. In addition, there are several nearby schools outside Mid North's boundaries that are attended by children living in Mid North. Conversely, there are children that attend schools inside Mid North's boundaries that don't live within the Mid North boundary. The table below is provided to offer some insight and to aid in intrepreting ISTEP and School Lunch data.

Mid North Students Attending Area Schools

Location	Total Enrollment as of September 2010	Number of Mid North Children Attending	Percent of Mid North Students Attending
School 27 (outside Mid North area)	208	15	7.2%
School 42 (outside Mid North area)	333	39	11.7%
School 43 (outside Mid North area)	484	145	30.0%

The percentage of students participating in the School Lunch Program is an indicator of student poverty and its concentration in public schools. Research has documented that children from low-income families are more likely than others to go without necessary food; less likely to be in good pre-school programs; more likely to be retained in grade; and more likely to drop out of school. The School Lunch Program provides low-income children with access to nutrition and in turn promotes learning readiness and healthy eating habits (Source: Kids' Well-being Indicator Warehouse).

The overall birth rate of a community relates to the community's rate of growth. In order to calculate a birth "rate" it's necessary to compare the number of births to a fixed population size. In this case, 1000 persons. This method is referred to as normalizing the data. As a result, even though Census Tract 350200 only had 10 births in 2009, it had the highest birth rate per 1000 persons in Mid North. The next highest rate occurred in Census Tract 350900.

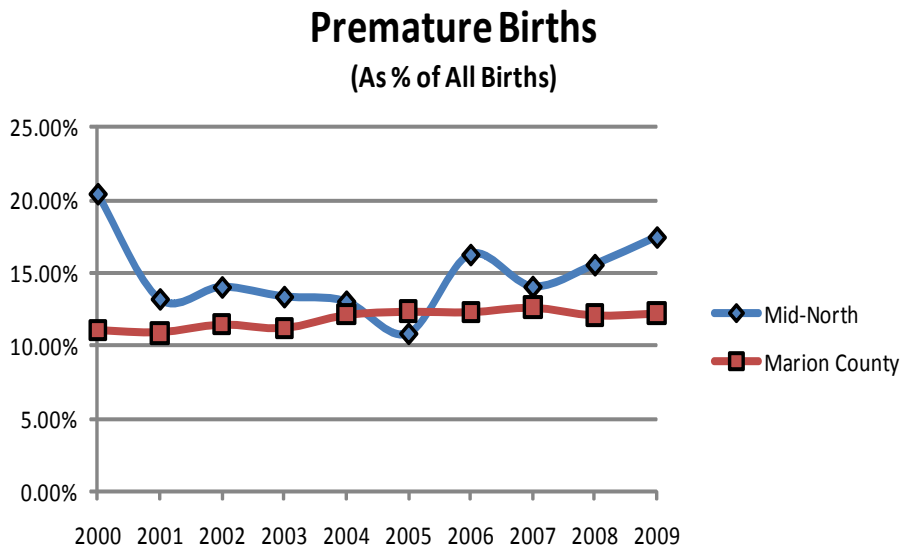
Premature births are a serious health problem. Although most premature babies survive, they are at increased risk for many health-related problems and complications, including long-term disabilities.

The Centers for Disease Control and Prevention's Healthy People 2010 goal is to reduce the percent of premature births to 7.6% or lower.

The rates of premature births in the Mid North area and Marion County (2000-2008) fall significantly short of the goal. Additionally, the Mid North rate is generally higher than the Marion County rate. This was especially true in 2000, 2006 and 2008.



Premature Births

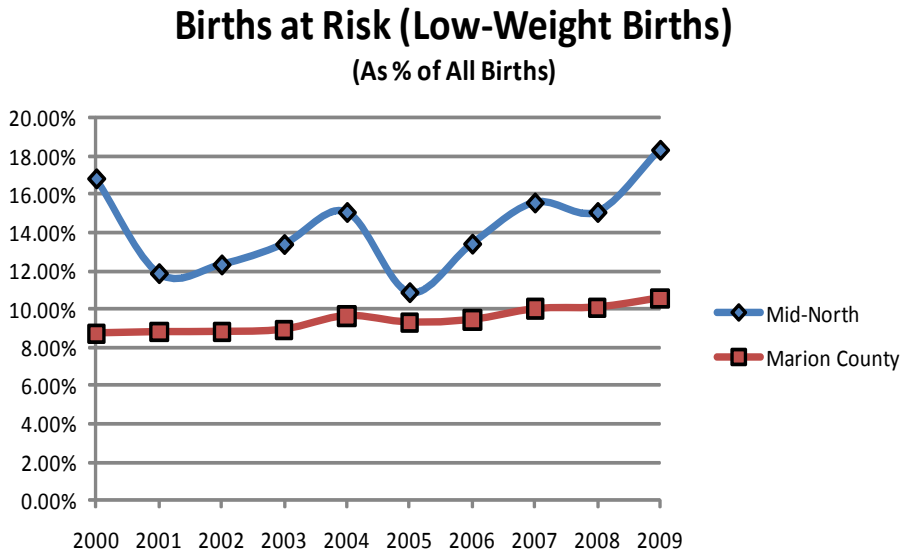
A national goal set by the Centers for Disease Control and Prevention as part of the Healthy People 2010 initiative is to reduce the percent of births that are low-weight to 5% or less by 2010.

As can be readily seen in the chart to the right, low weight births in the Mid North area and Marion County from 2000 to 2008 are significantly higher than the 5% 2010 goal. This is especially true in the Mid North area where the lowest rate only reached 10.9% in 2005.



At Risk Births (Low-Weight)

Data Source: Marion County Health Department

There are four historic districts, one of which is on the National Register of Historic Places, within the boundaries of the Mid-North Area. Meridian Park has the distinction of being listed on the National Register of Historic Places. The three remaining districts were identified in the Center Township, Marion County Interim Report, Indianapolis, Indiana Historic Sites and Structure Inventory, 1991, prepared by Historic Landmarks Foundation of Indiana and the Indiana Department of Natural Resources/Division of Historic Preservation and Archaeology.

- Watson Road
- Fall Creek
- Meridian Park, National Register of Historic Places (established in 1990)
- North Meridian Street Apartments

The Mid-North area also encompasses a portion of Fall Creek Parkway, designed by George Kessler. Fall Creek Parkway is an element of the Indianapolis Historic Park and Boulevard System that is listed on the National Register of Historic Districts (2003).

Individual National Register of Historic Places listings in the neighborhood are:

- Crown Hill Cemetery, 3402 Boulevard Place (listed in 1973)
- Marrott Hotel, 2625 North Meridian Street (listed in 1982)
- Louis Levey Mansion, 2902 North Meridian (listed in 1973)

The area also contains 56 historically significant places identified as "notable", (rating "N" on the following chart) or "outstanding", (rating "O"), in the Marion County, Indiana Historic Sites and Structures Inventory (Interim Report). The chart does not include notable or outstanding buildings in the historic districts.

A rating of "outstanding" means the property has enough historic or architectural significance that it is already listed, or should be considered for individual listing, on the National Register of Historic Places. "Outstanding" resources can be of local, state, or national importance. A "notable" rating means that the property did not quite merit an "outstanding" rating, but still is above-average in its importance. Further research or investigation may reveal that the property could be eligible for National Register listing. [The property may be eligible for the Indiana Register of Historic Sites and Structures.] Overall, there are 21 "outstanding" and 35 "notable places in the Mid North area.

Shown above: The Louis Levey Mansion. To the right: The former Marott Hotel, now used as apartments.

Rating	Name	Address	Form and Style	Date	Significance
